Lipoma Removal Procedure Note

PRE-OP DIAGNOSIS: lipoma

POST-OP DIAGNOSIS: Same

PROCEDURE: lipoma removal

Performing Physician: _
Supervising Physician (if applicable): _

PROCEDURE:

Anesthesia: _ 1% _ 2% Lidocaine _ epinephrine

Procedure: Timeout procedure was performed prior to initiating procedure to be sure of right patient and right location. The area surrounding the skin lesion was prepared and draped in the usual sterile manner and then was anesthetized. Skin incision was made in a linear fashion and lipoma was excised bluntly using small forceps. Hemostasis was assured. The patient tolerated the procedure well.

Closure: _ Monsel's for hemostasis _ suture () _ steri strips _ None

Followup: The patient tolerated the procedure well without complications. Standard post-procedure care is explained and return precautions are given.

📍 Ventura Family Medicine Residency Program | Cerner | Auto Text Dot-Phrases | Lipoma Removal Procedure Note

All templates, "autotexts", procedure notes, and other documents on these pages are intended as examples only. Your documentation in the medical record should always reflect precisely your specific interaction with an individual patient. Merely copying and pasting a prewritten note into a patient's chart is unethical, unsafe, and possibly fraudulent.

We are full spectrum Family Medicine. Our graduates are empowered to serve with continuity of care in all settings, valuing all peoples.
